Issue 8
Page 1 of 10
Date November 2004

Aerospace series
Bolt, Blind, Protruding Head,
Self-Locking

"When this standard is applied, a careful check must be made as to whether any protective rights exist. This standard issuer hereby disclaims any liability for infringement of patent or design rights resulting from the use of this standard'

Contents

1 Scope

This standard specifies the required characteristics of a Blind, Protruding Head, Self Locking Bolt, for use in aerospace applications.

2 Normative references

This Airbus Standard incorporates by dated or undated reference, provisions from other publications. These normative references are cited at the appropriate places in the text and the publications are listed hereafter. For dated references, subsequent amendments to or revisions of any of these publications apply to this Airbus Standard only when incorporated in it by amendment or revision. For undated references the latest edition of the publication referred to applies (including amendments).

ABS 0777	General technical specification for standard part
AMS5731	Steel corrosion and heat resistant bars and forgings
AMS5732	Steel corrosion and heat resistant bars and forgings
AMS5737	Steel corrosion and heat resistant bars and forgings
AMS5639	Steel corrosion resistant bars and forgings
AMS4928	Titanium alloy bars and forgings
AMS4967	Titanium alloy bars and forgings
ASTM D4181	Classification for Acetal molding and extrusions
EN 2000	Aerospace series – Quality assurance EN aerospace products – Approval of the quality system of manufacturers
EN 2424	Aerospace series - Marking of aerospace products
FCB200	Fasteners, blind, high strength for advanced composite materials
FCB203	Installation and inspection specification
ISO 2768-1	General tolerances
MBF2000	Procurement Specification
MBF2001	Installation and inspection specification
MIL-H-81200	Heat treatment of Titanium and Titanium alloys
MIL-L-46010	Lubricant solid film heat cured
MIL-T-9047	Titanium and Titanium Alloy bars
QQ-P-35	Passivation treatment for corrosion resistant steels
6AL-4V	Titanium Alloy

3 Requirements

3.1 Configuration, dimensions, tolerances and mass

3.1.1 The configuration, dimensions, tolerances and mass shall conform with figures 1 and 2 and tables 2 & 3. Tolerances not specified, shall be in accordance with ISO2768-1.

3.1.2 Locking feature consists of (3) indentations located approximately 120° apart on the periphery of the nut component. Distortion of the shank shall not prevent insertion of the fastener into a ring gauge of diameter equivalent to minimum recommended hole size. Force of insertion shall not exceed 5.0 pounds.

3.1.3 Holes should be straight and perpendicular to surface, and should be reasonably round and free from delaminations.

3.1.4 Sheets should be firmly clamped together during drilling.

3.1.5 Edge of holes should be given a slight chamfer.

3.1.6 Core bolt break-off limits is measured from skin surface.

3.1.7 Installation and inspection specification to MBF2001 or FCB203 (depending on which be the supplier).

3.1.8 Mechanical properties shall be in accordance with table 4.

3.2 Material and surface treatment

Table 1: Material and surface treatment

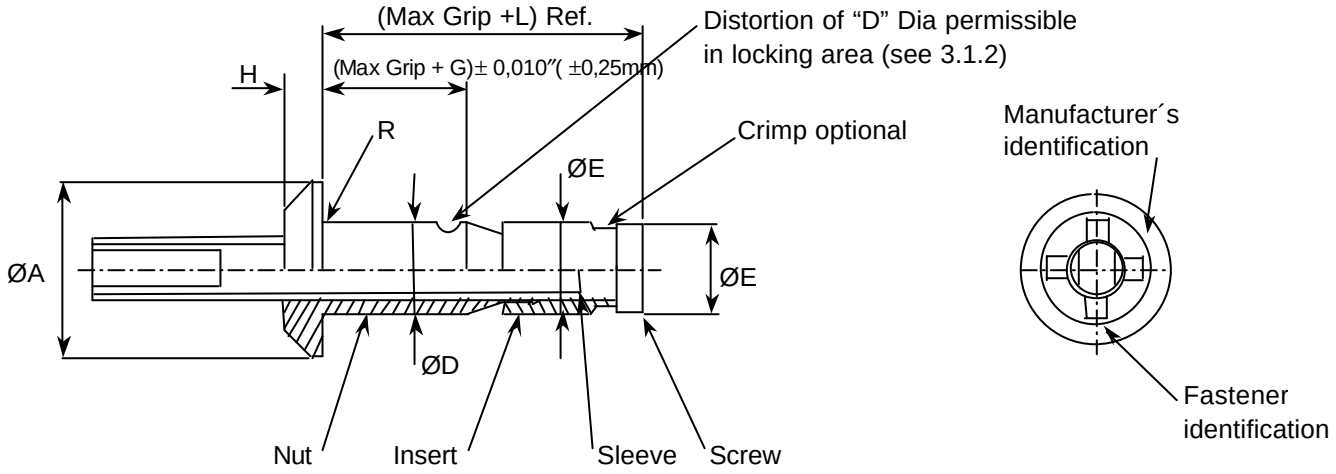
Item	Material	Heat Treatment	Surface treatment	Code
Nut	6Al–4V Titanium per MIL–T–9047 STA or AMS4928 or AMS4967	MIL–H–81200 Maximum Hydrogen 125PPM	Phosphate Fluoride	None
Screw	A–286 with chemical composition per AMS5731, AMS5732 or AMS5737	As Required for performance	Passivate per QQ–P–35	
Sleeve	304 Stainless steel per AMS5639			
Insert	ACETAL per ASTM D4181	–	None	
(*) Drive Nut	Mild steel	As required for performance	Light grey corrosion protective coating	

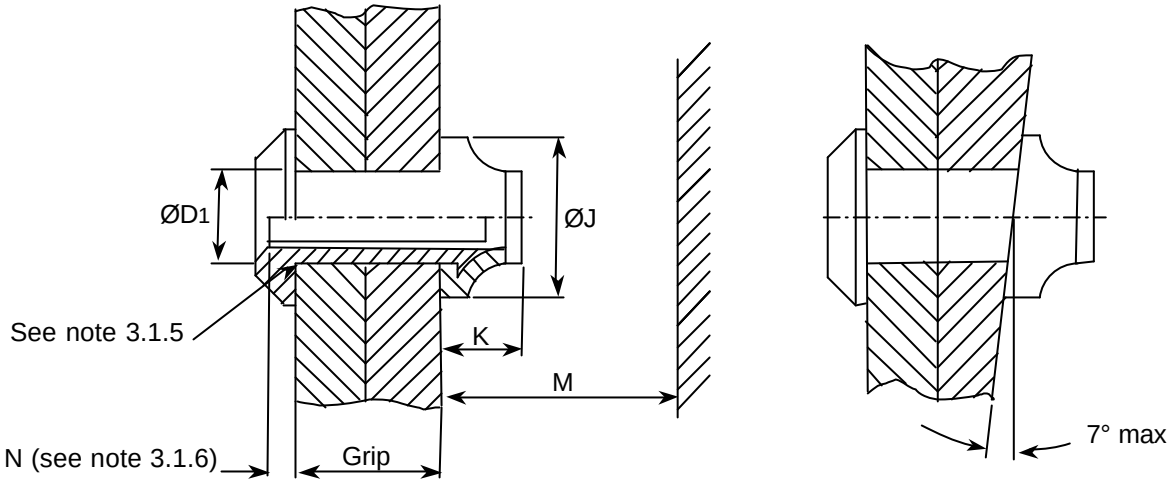
(*) Procurement code (Z) only

Note: Following lubricants may be applied to each one of the components by the fastener manufacturer, as required for performance (no other being allowed).

Nut: Cetyl Alcohol per MIL-L-87132.

Screw and Sleeve: Dry film lube per MIL-L-46010 (Type I or Type III), Everlube 812, or Cetyl Alcohol per MIL-L-87132.



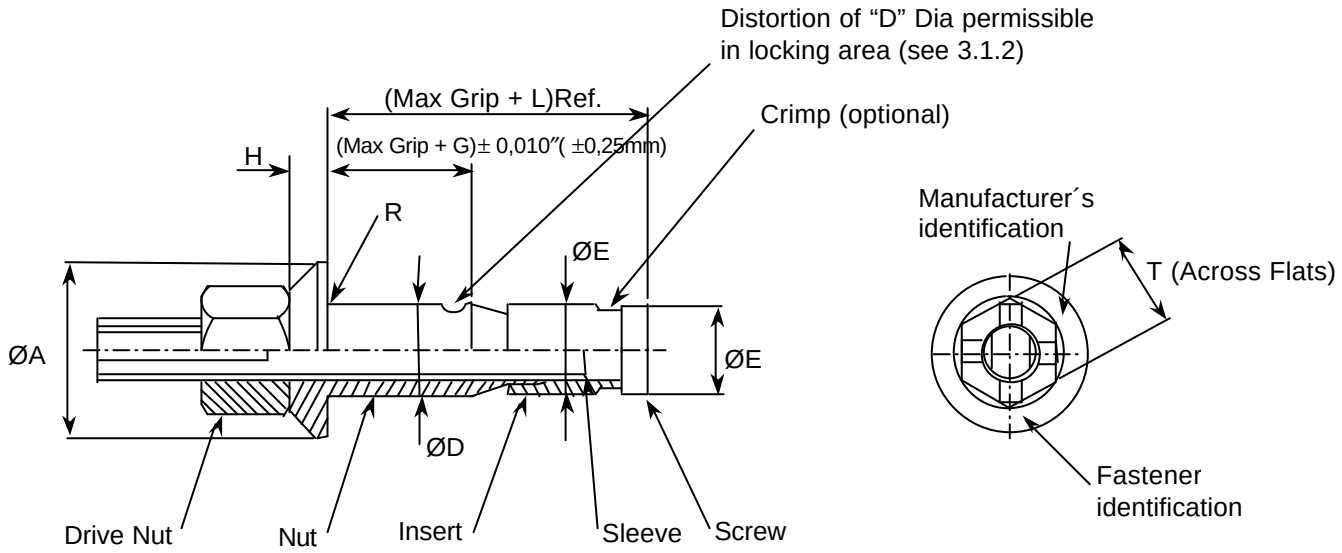


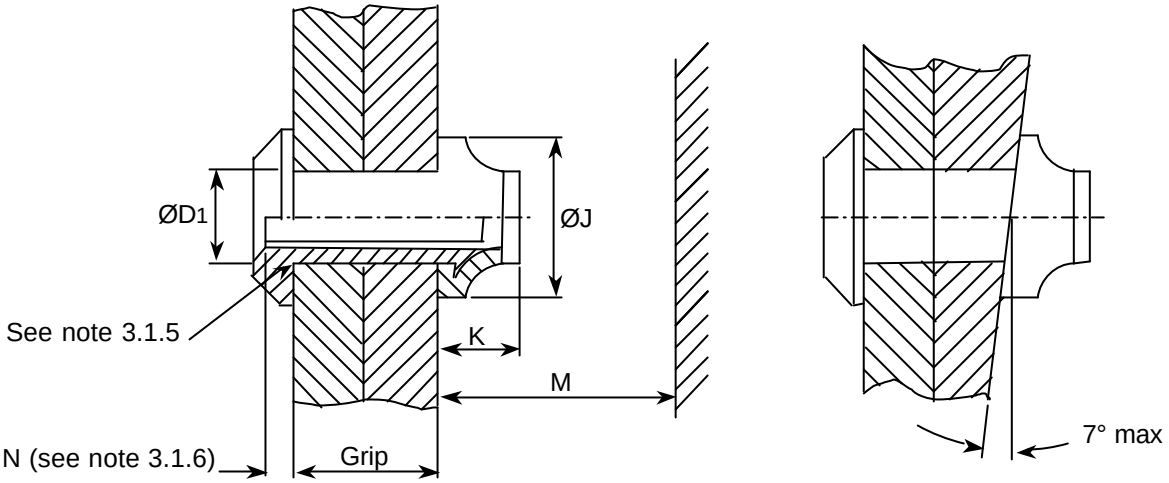
Typical installation
(see notes 3.1.3 and 3.1.4)

To be used on surfaces
with slope up to 7° max

Procurement code (Y)

Figure 1 - Configuration





Typical installation
(see notes 3.1.3 and 3.1.4)

To be used on surfaces
with slope up to 7° max

Procurement code (Z)

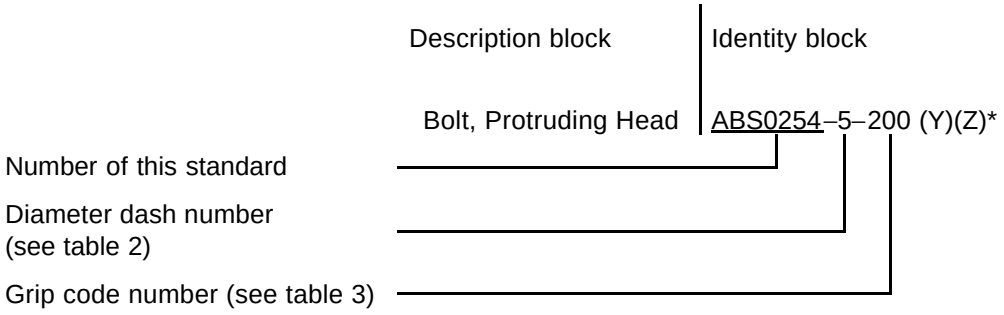
4 Designation

EXAMPLE:



*Letters ”Y” or “Z” are reserved for the sole use of Procurement Departments for ordering purposes.

5 Marking

EN 2424, style A

6 Technical specification

MBF 2000 or FCBF200 (depending on which be the supplier).

RECORD OF REVISIONS

Issue	Clause modified	Description of modification
7 06/04	3.1.6	Measure change of the core bolt break off limit. Rewritten in new format.
8 11/04	3.2 (note)	Removal of paraffin wax lubricant.
